NATIONWIDE SIMULTANEOUS

EARTHQUAKE DRILL

2nd QUARTER

#BidaAngHanda

Stage 4: Actual Conduct of an Earthquake Drill

PHASES OF AN EARTHQUAKE DRILL

Phase 1. Alarm

During the drill, the 1-minute alarm indicates earthquake or shaking.

Simpler used during an earthquake drill

Phase 2. Response

While the alarm is ongoing, everyone should perform "duck, cover and hold". Remain in this position until the "shaking" stops.

Take cover under sturdy table and hold to your cover until the shaking stops

Burndak to cover your head

Hold under an armchair

Phase 3. Evacuation

As soon as the shaking stops, immediately evacuate the school building and proceed to identified evacuation areas using the pre-determined routes guided by the class marshal or teacher.

Phase 4. Assembly

At the designated evacuation area, students must be grouped together according to the class where they belong.

Phase 5. Head Count

Teachers should check and make sure all students are accounted for.

Phase 6. Evaluation

The over-all coordinator will announce the termination of drill or "All clear".

An evaluation of the drill must be conducted to identify problems encountered during the drill and how these can be improved in future earthquake drills.

Observers will give their comments and suggestions when all are gathered in the evacuation areas.

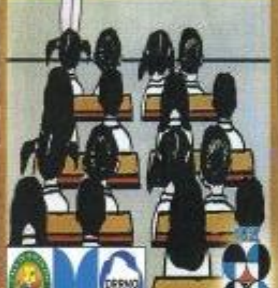

WHEN IS THE TIME TO EVACUATE?

After a very strong earthquake wherein you lose balance or could not stand, and heavy objects and furniture start to be moved or shifted.

All need arises or as declared by authorities.
